

# **Welcome to the Turtle club**

by John Cobb

# What is a turtle?

It is a member of the \_\_\_\_\_ kingdom  
and is a reptile like snakes and  
crocodiles.

# WHERE THEY LIVE

Usually they live in \_\_\_\_\_ climates  
how ever there are some species that  
can live \_\_\_\_\_ of the tropics

# how do you turtle?

turtles use their shells for protection against predators however some turtles have \_\_\_\_\_ such as the flatback sea turtles. This makes them easy prey.

**how many species of sea turtles are there?**

there are as many as \_\_\_\_\_ species  
including

the logger head

the green turtle

the leather back

Ect.....

# Body structure

Their shell is connected to the skeleton so they can not \_\_\_\_\_ come out of their shell.

# sea turtle populations

over the years the populations of sea turtles has \_\_\_\_\_ although a few populations have increased

**what do they eat?**

Some species eat \_\_\_\_\_ while  
others eat \_\_\_\_\_ and other marine  
invertebrates.
