

Primary Productivity- the rate at which Organic material is produced by photosynthesis organisms in an ecosystem

This determines the amount of energy available in an ecosystem.

Summer

Consumers

organisms that Consume plants or other organisms to obtain the energy necessary to build their molecules

Producers

make energy Storing molecules from Sunlight

Apr 15 - 7:20 PM

Animals are classified by their diet.

Carnivores- eat meat

Omnivores- eat both meat and plants

Herbivores- eat plants

Apr 15 - 7:28 PM

Detritivores- organisms that obtain their energy from the organic waste and dead bodies

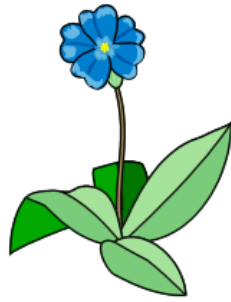

Fungi
Bacteria
Worms

Apr 15 - 7:31 PM

Trophic Levels

How many?
4

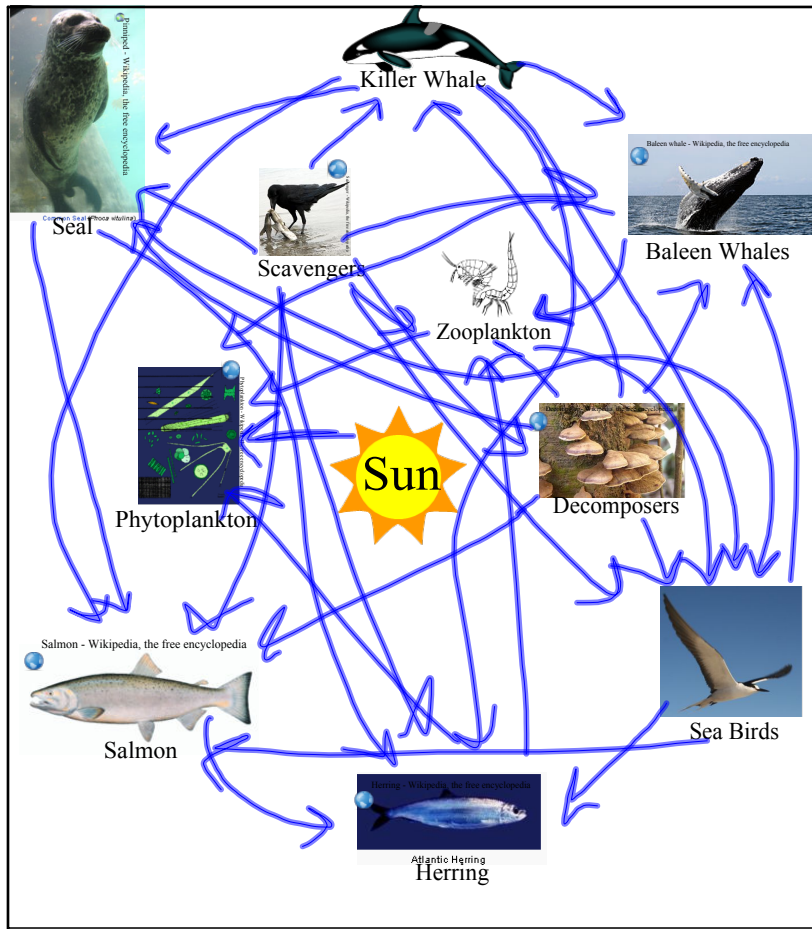

Food Chain

Apr 15 - 7:15 PM

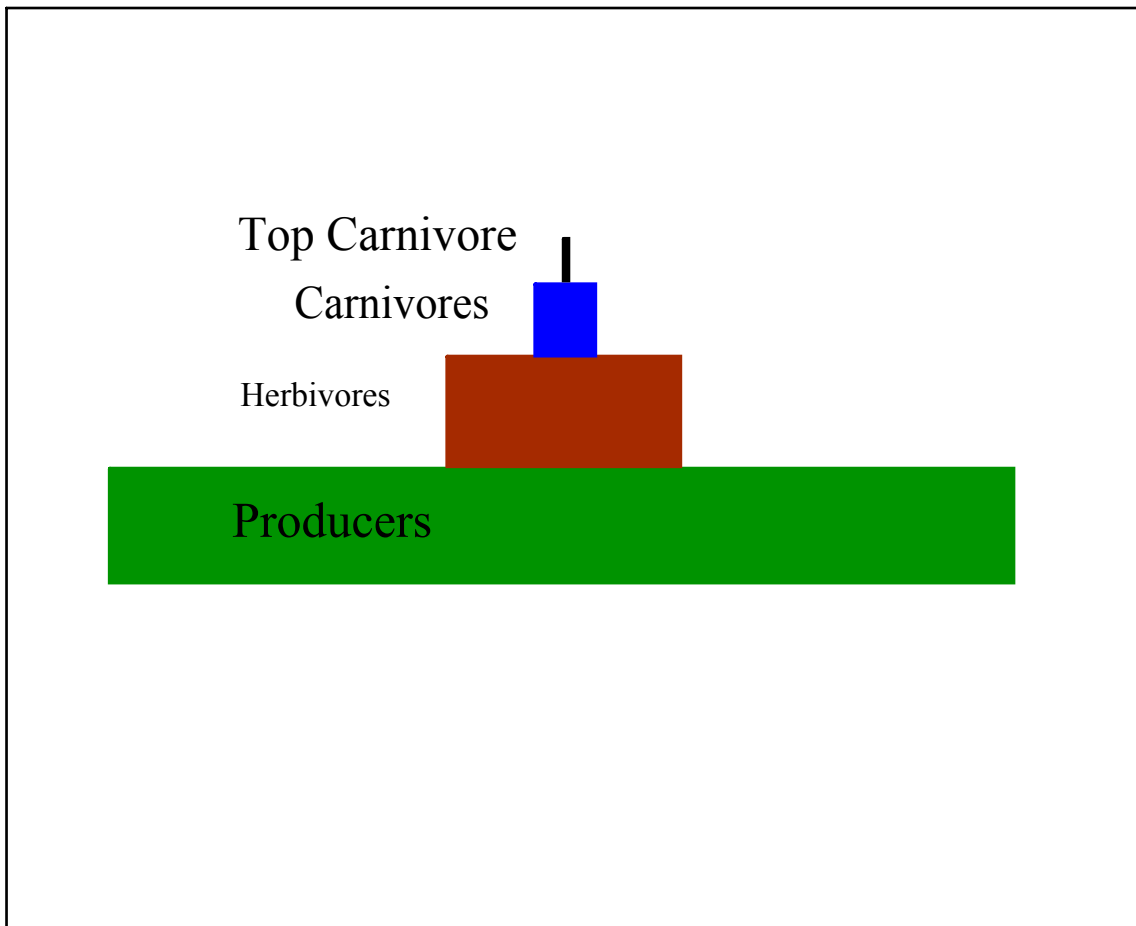

What is a food web?

multiple
interconnected
food
chains

Apr 15 - 7:28 PM

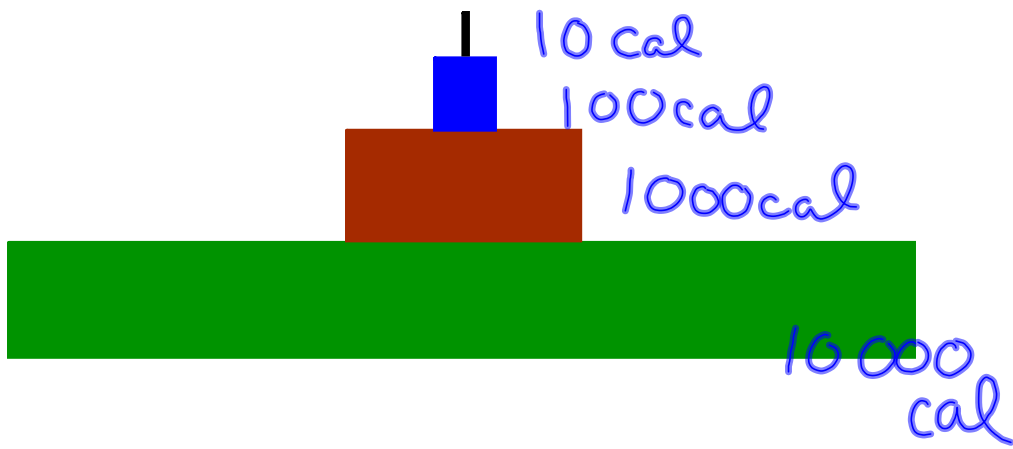

Apr 14-11:24 AM

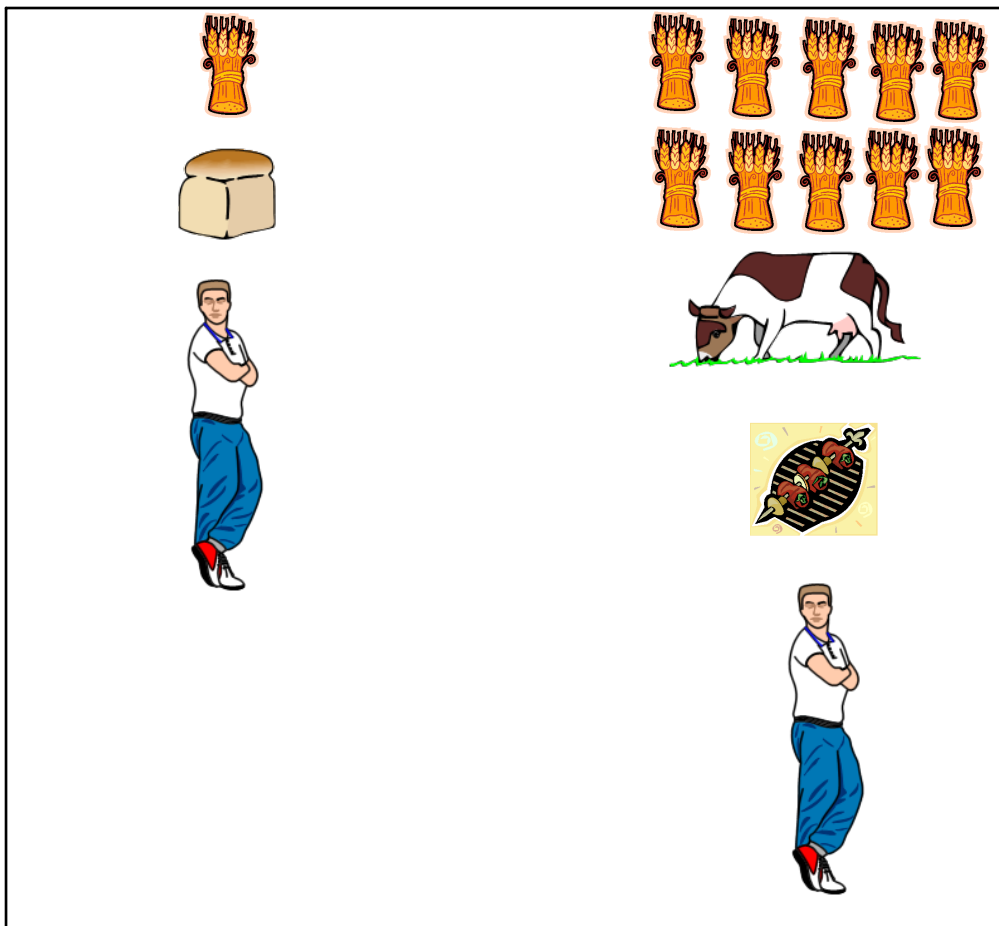

Apr 15 - 7:35 PM

10 % Rule

Apr 15 - 7:35 PM

Apr 15 - 7:39 PM
