

## APHID NOTES

Aphids belong to Kingdom \_\_\_\_\_,  
Phylum \_\_\_\_\_, and Class \_\_\_\_\_.

Aphids are very small, \_\_\_\_\_ bodied  
insects.

They can be as small as \_\_\_\_\_.

Aphids can be green, black, white, gray,  
brown, or even \_\_\_\_\_!

Aphids have a mouth that allow them to  
\_\_\_\_\_ the moisture out of the stems, leaves,  
and \_\_\_\_\_ of plants.

Because the liquid in the plants contain so  
much \_\_\_\_\_, aphids secrete a sweet, sticky  
substance known as \_\_\_\_\_.

Insects, like \_\_\_\_\_, love to eat honeydew.

So much so that some varieties of ants tend to aphids like \_\_\_\_\_.

Honeydew is a great place for certain \_\_\_\_\_ to grow

It's easy to find aphids in your hard just look for patches of mold or tiny \_\_\_\_\_ on your plants.

Aphids are a very \_\_\_\_\_ pest. They can damage plants and \_\_\_\_\_ beyond repair.

Aphids can cause plants to \_\_\_\_\_, \_\_\_\_\_ in growth, and even \_\_\_\_\_.

Introducing \_\_\_\_\_ to your garden can vastly decrease the amount of aphids in your garden.
